Setting up the 140-2000M Lever Tool

- 1) Remove the nosepiece (1) from the tool.
- 2) Thread the shorter portion of the mandrel (3) into the silver threaded portion of the tool, align the flat surfaces.
- 3) Thread the nosepiece (1) over the mandrel (3) back onto the tool until it is securely fastened.
- 4) Snap the anvil (2) onto the front of the nosepiece (1).

Installation Sequence

- 1) Extend the handles (5, 6) as far as they will go while threading the specific rivet nut type onto the mandrel (3).
- 2) Adjust the nosepiece (1) for the specific rivet nut type so that the rivet nut receives full thread engagement on the mandrel (3).
- 3) Thread rivet nut fully onto tool, contacting anvil (2).
- 4) Insert the rivet nut into the hole of your application while it is threaded onto the tool.
- 5) Grasp the handles (5, 6) & extend them until they stop.
- 6) While continuing to grasp the handles (5, 6) bring them back toward each other until they stop.
- 7) Repeat steps 5 and 6 until rivet nut is fully collapsed. (Rivet nut should fully collapse the first time). (Stroke can be determined by the indicator lines (7) which are in mm)
- 8) Turn the rear assembly (4) counterclockwise & remove the tool from the application.
